# Filtering

- Filtering

Filtering

UTMStack uses several filtering criteria to get information about specific events or alarms.

The **ADD FILTER** tab displays a window where you can choose the **Field** or the **Operator.** UTMStack supports a number of different data types for the fields.

The operator section lets you specify a logical expression search query to filter the events. All the filters can be enabled or disabled quickly, clicking on the Filter icon

The **CALENDAR** icon allows the user to set a custom range of time (from year to minutes), or apply commonly used filters such as the last 15 minutes, last hour, last seven days, last ninety days, last year, today, etc.

Filters applied:

now-7d → now 📅

Last		▼	**Apply**

⌄ **Commonly used**

last 15 minutes   last 30 minutes

last hour   last 24 hours

last 7 days   last 30 days

last 90 days   last year

⌃ **Custom range**
